

SPECIFICATIONS

Product	Side Mount Laser for Taurus Revolvers	Battery Life	*5 hrs. constant on, 10 hrs. pulse mode
Part #	CK-TA	Weight (w/Plate)	.875 oz., 23 g
MSRP	\$149.95	Length	.85 in., 21.59 mm
Compatible Firearms	Fits most Taurus revolvers with rubber grips	Width	.42 in., 10.67 mm
Power Output	Class IIIA, 5mw	Height	1 in., 25.4v mm
Laser Module	650nm	Range at Night	500 yd., 457.2 m
Batteries	4 x 377		

Laserlyte's Side Mount Laser (SML) line now offers a unit that fits nearly all Taurus® revolvers including the Judge, CIA, Protector and Raging Bull series. The new and inventive SML is easily mounted underneath the rubber grip of the revolver and is the only laser system available that allows the customer to use factory or custom grips and holster the firearm. This is especially exciting for Judge owners because the SML allows the user to utilize a laser, retain the factory Ribber Grips® that reduce felt recoil and holster the firearm.

The SML's activation switch is strategically placed at the back of the laser and is easily turned on by pressing the button on draw or when holstered. First press of the button produces constant on mode, second press produces pulse mode and third press deactivates the laser. The SML also has a customer-requested auto-off feature that displays a

unique flash after five minutes of operation and automatically turns the unit off after six minutes. Press the button at any time to reset this feature that prevents accidental activation and battery depletion. The unit is also easily moved from one Taurus revolver to another.

The compact base unit contains all components necessary for operation – laser, switch, battery and circuitry. The unit body is constructed from 380A die cast aluminum and the plates are made of 4130 hardened chromoly steel.

* Normal usage is defined as one minute on and one minute off. This test mimics actual usage where the unit is turned on and off and the battery is given time to automatically regenerate.
