Activation	Striker or Hammer
Material	Machined Brass

Batteries	3 x 377
Battery Life	3,000 shots
Length	1.35 in.
Weight	0.375 ounces

The caliber-specific Laser Trainer Cartridge offers a revolutionary way to train almost anywhere. The Laser Trainer Cartridge is the most realistic training option in LaserLyte's popular line of Laser Trainers with the choice to practice tap, rack, bang or malfunction drills. Designed for .380 ACP, this Laser Trainer Cartridge fits inside the pistol chamber and features a firing-pin activated switch that indicates bullet impact with a bright red laser dot. For the cost of one or two visits to a local range, shooting enthusiasts can enjoy a lifetime of training at the location that works best for them.

Each Laser Trainer Cartridge easily installs into the chamber in seconds, works regardless of barrel length and does not stick out of the barrel. This modified cartridge is rimless, so the Laser Trainer Cartridge is not expelled during dry fire, which allows for a variety of training drills. A hardened rubber plunger on the laser also acts as a built-in snap cap to

protect the firing pin and two rubber rings on the laser help ensure a proper fit in order to best replicate bullet impact for accurate training.

Paired with LaserLyte Trainer Targets, Laser Trainer Cartridges are the most effective system for pistol shooters to hone their skills. They are excellent tools for concealed carry training and drawing from a holster.
