LaserLyte interactive Laser Trainer Target that records where a laser hits the target, to save shooters time, money and ammunition. For use with LaserLyte's popular line of Laser Trainers including the original Laser Trainer, Laser Trainer Pro and new Laser Trainer Cartridge, the Laser Trainer Target is ideal for novice or professional shooters and even instructors.

Learn or teach shooting skills, such as unsighted fire, accuracy, grouping and trigger control. The Laser Trainer Target offers anyone the ability to practice shooting skills at almost any location, even a favorite recliner. Practice more often, become a more confident shooter and enjoy a lifetime of low-cost training with the LaserLyte Laser Trainer Target.

The Laser Trainer Target gives the user delayed shooting feedback, just like the shooting range, so the shooter can concentrate on the next shot instead of the last shot. To use the Laser Trainer Target simply aim at the target and dry fire the weapon with any LaserLyte Laser Trainer. To display impact, fire the laser at the red display circle on the face of the Laser Trainer Target. When finished, simply dry fire the laser aimed at the red reset circle to begin again with a fresh target.

At one-third the price of competitor's interactive targets, the LaserLyte Laser Trainer Target Target contains 62 laser-activated LED lights and operates without use of a computer, television or projector, up to 50 yards away.

—Accuracy Defined—
