FOR IMMEDIATE RELEASE

Realistic Training with the LaserLyte® Reaction Tyme Target; The TLB-RT

LaserLyte® Takes Firearms Training to a Whole New Interactive Level

COTTONWOOD, AZ— [LaserLyte®](http://www.laserlyte.com), innovators in firearms laser technologies, have developed a new interactive target system with dual modes for reaction and training; the Reaction Tyme Target, TLB-RT. This new laser training system comes with two (2) targets for more realistic training scenarios. Each target works independently of each other providing the user a variety of scenarios from near-to-far or left-to-right shooting.

The interactive system works in two modes; reaction and training. The reaction mode features random LED signals in intervals of three to seven seconds that can be shot with any of the LaserLyte® Trainers. When a hit is made the target celebrates with two beeps and a LED flash. The training mode allows the user to practice trigger control and accuracy with an always-on and ready-to-be-shot mode. When a hit is made, the target sounds two beeps and the LED flash.

The LaserLyte® Reaction Tyme Target allow for new and experienced shooters to gain increased levels of confidence and skills in the comfort of their own home while saving money on ammunition. The twin targets provide an active training session that can be set-up in a variety of ways. Any of the LaserLyte® Trainers work with the TLB-RT including the LT-PRO, LT-1 and the LaserLyte® Trainer Cartridges in .223, .380, 9mm, .40 S&W and .45 ACP.
